## How to make coffee with Drip filter

1. Open the lid of the coffeemaker.
2. Fill the water tank with fresh cold water up to the required level.
  - The indications on the left side of the water level window correspond to large cups (120ml).
  - The indications on the right side of the water level window correspond to small cups (80ml).

*Note: If the filter holder is not placed correctly, the lid cannot be closed and the drip stop cannot function properly. The drip stop prevents coffee from dripping through the filter onto the hotplate when the jug is removed*

3. Take a paper filter (type 1x2 or no. 2) and fold the sealed edges to prevent tearing and folding. Put the paper filter in the filter holder.

4. Put ground coffee (*filter-fine grind*) in the filter and close the lid of the coffeemaker.
  - For large cups: use one heaped measuring spoon of ground coffee for each cup.
  - For small cups: use one level measuring spoon of ground coffee for each cup.

5. Place the jug with the lid closed on the hotplate.

*Note: Make sure you put the jug on the hotplate with the spout facing into the appliance. If the spout of the jug sticks out from under the filter holder, the coffee may cool down. If you do not place the jug properly on the hotplate, the drip stop prevents the coffee from flowing into the jug. This may cause the filter to overflow.*

6. Press the on/off switch to switch on the appliance. The power-on light goes on. Let the water pass through the filter into the jug. If you want to remove the jug during brewing, the drip stop prevents coffee from dripping through the filter onto the hotplate. Place back the jug as soon as possible to prevent the filter from overflowing.

7. You can leave the jug on the hotplate to keep the coffee warm and to preserve its flavour.

8. After use, press the on/off switch to switch off the appliance.

*Note :The appliance does not switch off automatically.If you want to brew another jug of coffee right away, let the appliance cool down for 3 minutes first.*

9. Remove the filter holder and throw away the paper filter and its contents. If you have used the permanent filter, empty and rinse it.

*Tip: After the brewing cycle is completed, you can pour the hot coffee into a thermos jug to keep it hot and fresh.*
